

FS100ET5V 系列霍尔电流传感器

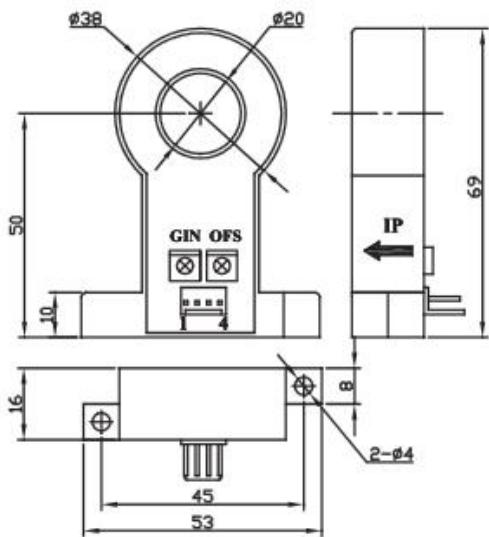

应用霍尔效应开环原理的电流传感器，能在电隔离条件下测量直流、交流、脉冲以及各种不规则波形的电流。

The current sensor using the Hall effect open-loop principle can measure DC, AC, pulse and various irregular waveforms of current under the condition of electrical isolation.

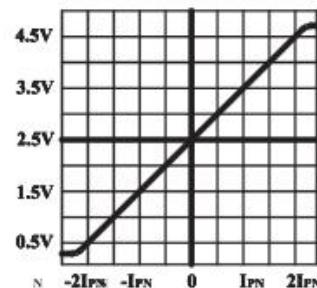

电参数/Electrical characteristics

	型号 Type	FS050ET	FS100ET	FS200ET	FS300ET	FS500ET	FS800ET	
I _{PN}	原边额定输入电流 Rated input current on primary side	50	100	200	300	500	800	A
I _p	原边电流测量范围 Primary current measurement range	0~±100	0~±200	0~±400	0~±600	0~±800	0~±800	A
V _{OUT}	副边额定输出电压 Rated output voltage of secondary side	±1或±2(±1%)						V
V _c	电源电压 Supply voltage	+5(±5%) or +12V						V
I _c	电流消耗 Current consumption	25						mA
V _d	绝缘电压 Insulation voltage	在原边与副边电路之间2.5KV有效值/50Hz/1分钟						
e	线性度 linearity	±1						%FS
V _o	零点失调电压 Zero offset voltage	TA=25°C	2.5V±1%					
V _o	磁失调电压 Magnetic offset voltage	I _p →0	<±20					
V _o	失调电压温漂 Offset voltage temperature drift	I _m =0 TA=-25~+85°C	<±0.5					
T _r	响应时间 Response time	≤3						μs
f	频带宽度(-3dB) Band width (-3dB)	DC~20						kHz
T	工作环境温度 Operating ambient temperature	-40~+85						°C
T _s	贮存环境温度 Storage ambient temperature	-40~+100						°C
R	负载电阻 Load resistance	≥10K						Ω
	标准 Standard	GI/FS-0105						

外形尺寸(mm)/Dimensions of drawing(mm)

输入电流—输出电压

引脚说明：
1: +5V
2: 空
3: Vout
4: 0V(电源地)
OFS: 零点调节
GIN: 幅度调节

使用说明/Instructions

- 错误的接线可能导致传感器损坏。传感器通电后，当被测电流从传感器箭头方向穿过，即可在输出端测得同相电压值。
Incorrect wiring may cause damage to the sensor. After the sensor is powered on, when the measured current passes through the arrow direction of the sensor, the in-phase voltage value can be measured at the output end.
- 传感器的输出幅度可根据用户需求进行适当的调节。
The output amplitude of the sensor can be adjusted according to the user's needs.
- 可按用户需求定制不同额定输入电流和输出电压的传感器。
Sensors with different rated input current and output voltage can be customized according to user requirements.
